

New Saab 9-3 MOST™ solution provided by Mecel AB.

Göteborg, Sweden – January 15, 2003

Mecel AB is the main software maker for the development of the New Saab 9-3 infotainment system introduced to the public in September 2002 by Saab at the Mondial de l'Automobile (Paris Auto Show). A Delphi Delco Electronics Systems subsidiary, Mecel has played a significant role in supporting the Tier One supplier Delphi Corp. (NYSE: DPH) since the program started in 1999.

The distributed infotainment system uses a Media Oriented System Transport (MOST™) Bus, a high-speed optical network tailored for the vehicle environment making a pool of multimedia services available to the devices on the network. Mecel AB has implemented and verified the MOST™ technology used in the Saab 9-3 Integrated Control Module (the Master Node of the Network) and several slave nodes on the bus. Mecel/Delphi technologies on the new 9-3 include integrated control modules, communication units, DVD reader, telematics and navigation for the mobile multimedia system.

In order to utilize the full bandwidth of the MOST™ Bus in a cost efficient way, a unique technical solution from Mecel is used to operate the MOST™ Bus in "parallel combined mode". This mode enables nodes on the bus to access both synchronous (ex. audio) and asynchronous (ex. CD-ROM) data simultaneously at full bandwidth.

About Mecel

Mecel AB, a subsidiary of Delphi Delco Electronics Systems, with operations in Gothenburg and Åmål, Sweden, is a systems, software and service development company with more than 20 years experience in developing solutions for the automotive industry. With expertise in on-board application platforms (WinCE, JAVA, embedded systems), communication concepts (CAN, MOST™, Bluetooth, GSM), and off-board service development, Mecel can with its 180 employees manage all kinds of systems and software development programs.

Further information about Mecel is available at www.mecel.se.
